Your Happiness Is Our Motivation

WELCOME

Dear Patient,

This brochure provides information concerning our office and all the services we offer in the areas of surgery, endoscopy and coloproctology.

You are the center of attention in our facility, and we will devote our time to you. I am board certified in surgery and specialize in endoscopy (gastroscopy and colonoscopy) and coloproctology (diseases of the intestine and recto-sigmoid).

Our philosophy is to create for you a calm and relaxed atmosphere; our experienced, competent and friendly staff will help you feel confident and secure. Your experience from a complete diagnostic examination to treatment will be performed under the guidance of a single specialist, who is thoroughly familiar with the most up to date information, equipment, and procedures.

We have office hours in the early morning, in the evening, and on Saturdays, which should be convenient to your daily routine.

Our goal is establish your confidence in us and the proposed treatment plan and to ensure you are completely satisfied with our services.

Prof. Dr. Werner Kauer

DIAGNOSTIC

- ▶ Proctoscopy
- ▶ Rectoscopy
- ▶ Colonoscopy
- ▶ Gastroscopy
- ▶ Ultrasound
- ▶ Rectal endo-ultrasound
- ▶ Anal-manometric measurement
- ▶ Intestine cancer prevention and aftercare
- ▶ Official advisor of the German Continence Society

We can perform scheduled gastroscopies and colonoscopies under sedation, which will be provided solely by board-certified anaesthesiologists to insure your safety and wellbeing. If, after our conversation, you prefer to undergo the procedure without sedation, and it can be done successfully from our medical point of view, we will certainly comply with your decision.

Gentle Colonoscopy

Sedation and CO₂ (carbon dioxide) colonoscopy are the two important factors for a gentle colonoscopy. The CO₂ colonoscopy uses carbon dioxide instead of air to insufflate the colon. Since CO₂ leaves the colon 150 times faster than air, abdominal distension or abdominal pain are no longer present after the colonoscopy and the patient experiences the examination more comfortable.

TREATMENT

Conservative Treatment

- ▶ Pelvic floor treatment
- ▶ Biofeedback training with and without electrical stimulation
- ▶ Tibial nerve stimulation for fecal incontinence
- ▶ Medical / symptomatic treatment

Endoscopic Treatment

- ▶ Bouginage (Dilatation) of stenosis in the upper or lower GI- tract
- ▶ Argon plasma coagulation in angiodysplasia
- ▶ Clipping or injection therapy for bleeding
- ▶ Polypectomy
- ▶ Removal of foreign bodies
- ▶ PEG (Percutaneous Endoscopic Gastrostomy) placement
- ▶ Combined endoscopic and surgical procedures

Operative Treatment

- ▶ Excision of abscesses, anal vein thrombosis or in pilonidal disease (open or closed wound treatment, flap surgery, pit picking)
- ▶ Fissurectomy, lateral sphincterotomy
- ▶ Open-lay fistulotomy, fistulectomy, mucosal flap, sphincter preserving treatment (fistula clip, fistula plug)
- ▶ Excision or coagulation of condylomata
- ▶ Hemorrhoid excision (Milligan-Morgan, Ferguson, Parks), Hemorrhoidal lifting (Longo) and Hemorrhoidal artery ligation (HAL-RAR)
- ▶ Excision of skin tags
- ▶ STARR / Trans star procedure for obstructive defecation syndrome
- ▶ Altemeier procedure, perineal stapled resection or laparoscopic resection rectopexy for rectal prolapse
- ▶ Anal sphincter repair in sphincter defects
- ▶ Sacral nerve stimulation for fecal incontinence
- ▶ Sphincter augmentation for fecal incontinence
